

HUCKLEBERRY TypeEngine Templates Documentation

Thank you for purchasing the Huckleberry TypeEngine Templates. We hope you find them to be the perfect match for your iOS Newsstand publications.

Using the Templates

For the purposes of this documentation, we assume that you already have a TypeEngine account. If not, you should go ahead and start your account at <http://typeengine.net/>

Once you have a TypeEngine account, you can log into your TypeEngine dashboard at <https://console.typeengine.net/>

SETTING THE APP STYLING

1. Log into the TypeEngine console.
2. Click on **Publication** along the top.
3. Click on **App Styling**.
4. Copy and paste the contents of the `app-styling.json` file inside the Huckleberry package into the text area here, replacing everything else.
5. Click **Save**.

UPLOADING THE TEMPLATES

1. Log into the TypeEngine console.
2. Click on **Publication** along the top.
3. Click on **Article Templates**.
4. Click **New Template**.
5. Give your template a name and upload the Archive.zip file inside the template folder.
6. Click **Upload New Template**. The template is now ready to be used.

CREATING THE SAMPLE ARTICLE

To help you get started, we have provided sample content that you can use to create an article and test out the various design elements that are available to you. You can find the *sample* content inside the sample folder in your Huckleberry package.

1. Log into the TypeEngine console.
2. Click **Articles** along the top.
3. Click **Create New**.
4. Enter your article's title. For example, enter *Test Article*. Click **Create**.
5. Copy and paste the contents of the *content* file into the main textarea. Click **Save Draft**.
6. Click on **Author**. Select an author or click **Create New Author**. Fill out all the fields and click **Save Author**.
7. Click on **Metadata**. Here you can select the issue to which the article should be assigned; you can assign the template; set a subtitle; and complete a number of other fields. To make things easier for you, we have added a separate file inside the *sample* folder called *subtitle*, which you can copy and paste into the **Subtitle** field. Click **Save Metadata** once you are done.
8. Next click on **Assets**. Here you can upload the images or audio files you would like to include in your article. For the sample content, you should upload the three image files included in the *sample* folder.
9. Finally, click on **Featured Image**. Select an image to be your featured image. Note that with the pattern-based templates (all the ones ending with *pattern-light* or *pattern-dark*), the image you upload will be repeated as a background pattern behind the title of the article. Click **Save Featured Image**.
10. Optionally add custom CSS or an advertisement to appear after the article.

Once you have created your article, test it out using the preview app on your iPhone, iPod Touch or iPad. Download the app from <http://appstore.com/typeengine> if you don't have it already.
